## Notes for Half Each Sharing

The objective of this work is to help pupils identify half of a quantity.

The first page covers sharing quantities into two equal parts and this does need someone able to read the text with each of problems so it could be done as a class activity or in groups provided that each group had a reader.

The second page is intended as a individual exercise and it is suggested that pupils will obtain a better understanding if the half numbers are written twice as shown below.

The third and final page is an exercise that could be done individually or in twos.

Half Each Sharing

Share 4 slices of bread between 2 people

Share 6 balloons between 2 people

Share 6 beads between 2 people

Share 10 beads between 2 people

Share 12 beads between 2 people

What is half of each set of beads?

000
000

$\stackrel{0000}{00} \square \square$
$\bigcirc \bigcirc$

1000

0000

$\bigcirc$

0000
0

OO $0^{\circ} 0^{0}$

## Half of Each Number
